

### Interview Project:

Using the flickr api, construct an application which will provide the user a search box and a photo slideshow. Through the search box, the user will query flickr with a key word and the application will then display photos matching this keyword on the slideshow. See mock below

When the user clicks on any of the teaser boxes on the bottom of the page, the selected photo should display in the main area above, between the navigation arrows.

### Tech Stack:

- ReactJS
- Webpack
- ES6
- Eslint

Bonus points for using the least amount of third party libraries possible.

### Deliverables:

- Github repo with your solution.
- Unit testing to go with your solution.
